

## Gulf of Mexico Harmful Algal Bloom Bulletin

Region: Texas Monday, 16 May 2011 NOAA Ocean Service NOAA Satellite and Information Service NOAA National Weather Service Last bulletin: Monday, May 9, 2011

Satellite chlorophyll image with possible HAB areas shown by red polygon(s). Cell concentration sampling data from May 6 to 12 shown as red (high), orange (medium), yellow (low b), brown (low a), blue(very low b), purple (very low a), pink (present), and green (not present). For a list of cell count data providers and a key to the cell concentration categories, please see the HAB-OFS bulletin guide:

# **Conditions Report**

There is currently no indication of a harmful algal bloom at the coast in Texas. No impacts are expected alongshore Texas today through Sunday, May 22.

### **Analysis**

There is currently no indication of a harmful algal bloom along the coast of Texas. Recent MODIS imagery (5/13 to 5/15) is almost completely obscured by clouds along the Texas coastline south of the Corpus Christi Bay area. Elevated (2- <10  $\mu$ g/L) chlorophyll is visible in MODIS imagery (5/13) along the coast from Sabine Pass to the Corpus Christi Bay area with patches of high (>10  $\mu$ g/L) chlorophyll present from Sabine Pass to San Luis Pass. Elevated chlorophyll present at the coast is likely due to the resuspension of benthic chlorophyll and sediments and not related to a harmful algal bloom. Forecast models indicate a maximum transport of 20 km south along the coast from Port Aransas from May 13 to May 19.

#### Kavanaugh, Derner

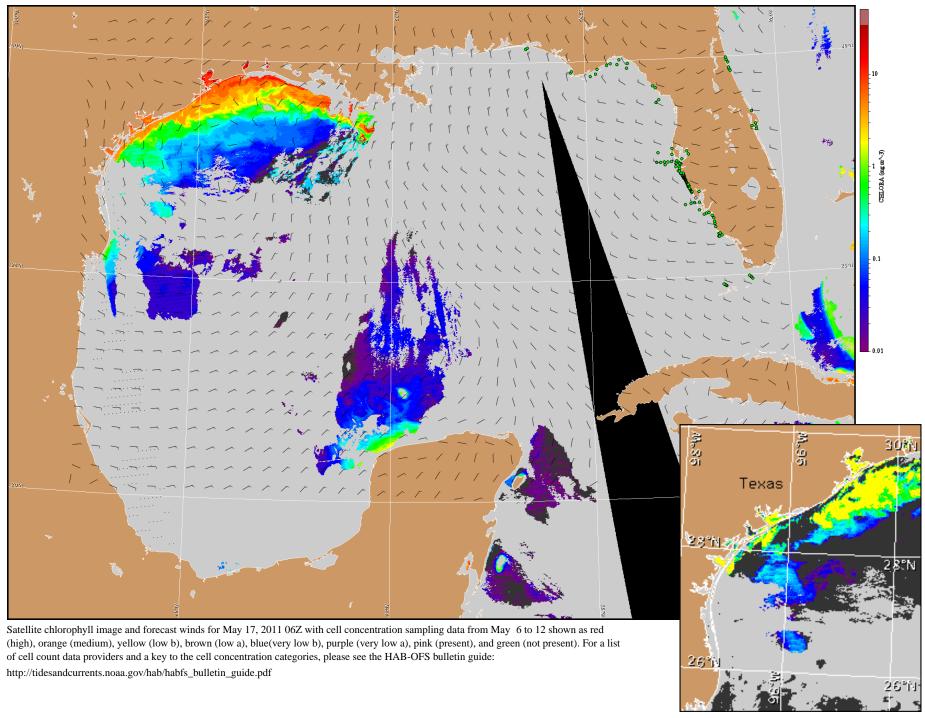

Wind speed and direction are averaged over 12 hours from buoy measurements. Length of line indicates speed; angle indicates direction. Red indicates that the wind direction favors upwelling near the coast. Values to the left of the dotted vertical line are measured values; values to the right are forecasts. Wind observation and forecast data provided by NOAA's National Weather Service (NWS).

#### Wind Analysis

**Port Aransas**: North winds (10-15 kn, 5-8 m/s) today shifting east to southeast (5-10 kn, 3-5 m/s). East winds (5-10 kn) Tuesday becoming southeast winds (10-25 kn, 5-13 m/s) Tuesday afternoon through Friday.

Verified and suspected HAB areas shown in red. Other areas of high chlorophyll concentration shown in yellow (see p. 1 analysis for interpretation).
